

MOLLE Clip

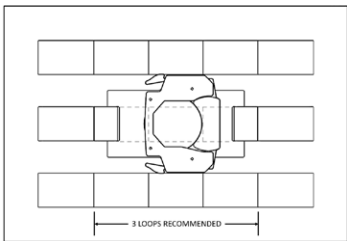

Installation Instructions:

STAR-PAN NG

Next-Generation
Soldier Power/Data Hubs

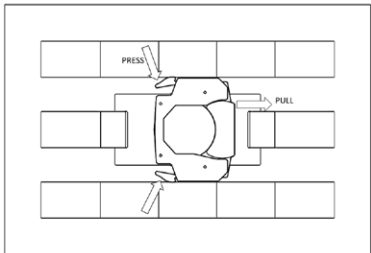

First secure the clip to the MOLLE loops by aligning the body of the clip with a single loop and hooking all four edges of the clip in the neighboring MOLLE loops.

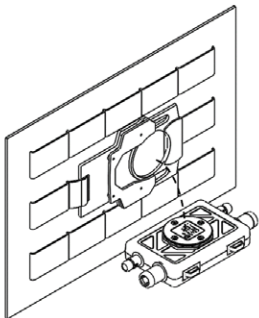

Once attached, the MOLLE clip will take the span of 3 loops.

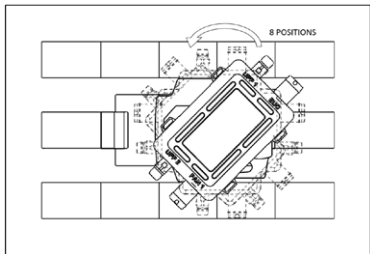

Attaching the STAR-PAN NG HUB

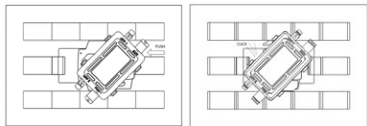

After the MOLLE clip has been secured, the Star-Pan hub can be attached. Start by unlocking the clasp. To do this, press the latches on either side of the clip.

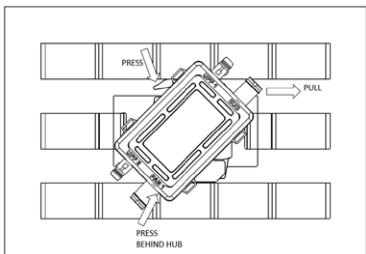

The hub can then fit into the open clasp at any desired angle.

Once the desired angle has been chosen, lock the hub in place by pushing the lock back until it clicks shut.

If the hub needs to be removed from the MOLLE clip, follow the same process as above by pressing the tabs behind the hub.
